Academic project:

DVD Store Database Management System

Description: The main purpose of the project is to build an optimized database with the information about the

DVDs available in the store and their descriptions. Advantage of having this type of database is that customers

can get info required about all the DVDs in the store and user profile in a quick and easy way.

This is a user

friendly Database Management System for a DVD store. This Database provides the required information

about the DVD in easy and with less queries. Immense information is related in effective way so that the user

feels good in accessing the data about the required DVD.

Roles and responsibilities:

- Created and managed the data aspects within a database architecture. • Helped in development, implementation, and query optimization.
- Used Microsoft Office Excel, PowerPoint, and Word for creating tables.
- Responsible for data analysis and writing complex Oracle PL/SQL code & SQL queries.
- Created and maintained PL/SQL packages, functions, stored procedures and database schema diagrams.

Environment: Oracle SQL developer (2012), MS office tools
